NEW QUESTION: 2

What does the WLST command pwd() do?

- A.** Initiates an operation to change the current WLST user's password.
- B.** Displays the location in the file system where the current WLST session was launched.
- C.** Prints the name of the current server.
- D.** Prints the name of the current domain.
- E.** Displays the current location in the configuration or runtime bean hierarchy.

Answer: E

Explanation:

The pwd command displays the current location in the configuration or runtime bean hierarchy.

This command is useful when you have turned off the prompt display of the path information using the prompt command.
