The 6.6.0.0 subnets are not reachable from R4. how should the problem be resolved?

- A. Remove distribute-list 64 out on R6

- C. Apply access-list 46 in R6 to a different interface
- D. Edit access-list 46 in R6 to permit all the 6.6.0.0 subnets
- E. Remove distribute-list 1 in ethernet 0/0 in R4
- F. Apply access-list 1 as a distribute-list out under router ospf 100 in R4

Answer: A

Explanation:

Explanation

Here we see from the running configuration of R6 that distribute list 64 is being used in the outbound direction to all OSPF neighbors.

However, no packets will match the 6.6.0.0 in this access list because the first line blocks all 6.0.0.0 networks, and since the 6.6.0.0 networks will also match the first line of this ACL, these OSPF networks will not be advertised because they are first denied in the first line of the ACL.
