#### **NEW QUESTION: 2**

When A CSV file is created for use with the Cisco Unified Communications Manager Auto-Register Phone

Tool, how is the IP phone MAC address configured?

**A.** When the CSV file is created, the Create Dummy MAC Address option must be selected before the file

is uploaded into the Cisco Unified Communications Manager BAT tool.

**B.** The MAC address is left blank in the CSV file and Cisco Unified Communications Manager BAT queries the Cisco Unified Communications Manager device database for the MAC address that

matches the extension created in the CSV file.

**C.** A dummy MAC address is entered for each phone in the CSV file.

**D.** The MAC address is left blank in the CSV file and Cisco Unified Communications Manager BAT imports the CSV file with the Create Dummy MAC Address option selected.

**Answer: D**

### **NEW QUESTION: 3**

Which of the following sleep modes is also known as Hibernation in Windows operating systems?

**A.** S1

**B.** S4

**C.** S3

**D.** S2

**Answer: B**

Explanation:

The S4 sleep mode is also known as Hibernation or hibernate mode in Windows operating systems. Hibernate mode is a power saving feature for computers. In hibernate mode, the current state of a computer is saved to the hard disk, and the computer shuts down. A user will have to power on the computer to restore the previous settings. When a computer resumes from hibernate mode, it reads the saved settings from the disk and restores the system state as it was before it entered hibernate mode. By default, hibernate mode is disabled. If a computer is not ACPI-enabled or APM-enabled, users will have to enter hibernate mode manually. Users cannot set the computer to automatically hibernate after a certain time. With ACPI-enabled and APM-enabled computers, users are able to set hibernate mode automatically. Answer option D is incorrect. The S1 mode is the most power hungry sleep mode. In this mode, the CPU stops executing instructions and the processor cache is flushed, but power is still supplied to the CPU and memory. All other unused devices are powered down. Answer option B is incorrect. The S2 mode uses less power than S1 mode. In this mode, the computer's processor is powered down. Answer option A is incorrect. The S3 mode is also known as Stand by mode. In this mode, the computer supplies power only to the RAM. This mode is also known as Suspend to RAM.
