**NEW QUESTION: 4**

You are designing a shared storage solution for your company in Oracle Cloud Infrastructure. The proposed storage solution should allow users to create a hierarchical structure (similar to the directory structure in Linux or Windows based systems). The solution should provide data encryption and a large amount of storage space.

Which would be the best implementation strategy?

**A.** Use block storage. Create and attach a large block storage volume to one compute instance. Assign a public IP to the compute instance. Store data on the block storage and access it by connecting to the compute instance.

**B.** Use object storage. Create multiple namespaces with one bucket each. Make the buckets publicly accessible.

**C.** Use object storage. Create a single namespace and multiple buckets to create the hierarchical directory structure.

**D.** Use file storage service. Create a file system and a mount target. Share the private IP of the mount target.

**Answer: D**
