NEW QUESTION: 3
Your company subscribes to the Office 365 Enterprise E1 plan. You are the Microsoft Exchange Online administrator.

In the last week, employees have reported that they are receiving non-delivery report messages from other companies. The employees have not sent messages to recipients within those companies.
You need to prevent non-delivery report messages from reaching employees.
Which content filter option should you turn on in the Exchange admin center?
A. SPF record: hard fail
B. Block all bulk email messages
C. Conditional Sender ID filtering: hard fail
D. NDR backscatter
Answer: D
Explanation:
Explanation
The non-delivery report messages the users are receiving are the result of Backscatter. Backscatter is the automated bounce messages that are sent by mail servers, typically as a result of incoming spam. Because Exchange Online Protection (EOP) is a spam filtering service, email messages sent to nonexistent recipients and to other suspicious destinations are rejected by the service. When this happens, EOP generates a non-delivery report (NDR) message and delivers it back to the "sender." Because spammers frequently use a forged or invalid "From" address in their messages, the sender address to which the NDR is sent may result in a backscatter message.
