As you can see, our products are absolutely popular in the market.

NEW QUESTION: 1
An issue exists in which "reserved" key words have been used or included in the custom alias property for a downstream system. The reserved words are "Dynamic" and "MBRNAME". The steps for creating a real- time validation are:
1. Create a custom property to verify that the value input in the custom alias property does not contain the reserved words.
2. Test the custom property.
3. Create a custom Validation with the "Property Equals Value" class.
4. Test the validation.
5. Assign the Validation to a version.
A. 1, 2, 3, 4 only
B. 1, 3, 5 only
C. 3, 5 only
D. 1, 2 only
E. 1, 2, 3, 4, 5
Answer: A

NEW QUESTION: 2
Your network contains an Active Directory domain named contoso.com. The domain contains an Application server named Server1. Server1 runs Windows Server 2012 R2.
Server1 is configured as an FTP server.

Client computers use an FTP Application named App1.exe. App1.exe uses TCP port 21 as the control port and dynamically requests a data port.
On Server1, you create a firewall rule to allow connections on TCP port 21.
You need to configure Server1 to support the client connections from App1.exe.
What should you do?
A. Run Set-NetFirewallRule -DisplayName DynamicFTP -Profile Domain
B. Create an inbound firewall rule to allow App1.exe.
C. Run netsh advfirewall set global statefulftp enable.
D. Create a tunnel connection security rule.
Answer: C
Explanation:
Explanation/Reference:
Explanation:
The netsh firewall context is supplied only for backward compatibility. We recommend that you do not use this context on a computer that is running Windows Vista or a later version of Windows.
In the netsh advfirewall firewall context, the add command only has one variation, the add rule command.
Netsh advfirewall set global statefulftp:
Configures how Windows Firewall with Advanced Security handles FTP traffic that uses an initial connection on one port to request a data connection on a different port.
When statefulftp is enabled, the firewall examines the PORT and PASV requests for these other port numbers and then allows the corresponding data connection to the port number that was requested.
Syntax
set global statefulftp { enable | disable | notconfigured }
Parameters
statefulftp can be set to one of the following values:
enable
The firewall tracks the port numbers specified in PORT command requests and in the responses to PASV requests, and then allows the incoming FTP data traffic entering on the requested port number.
disable
This is the default value. The firewall does not track outgoing PORT commands or PASV responses, and so incoming data connections on the PORT or PASV requested port is blocked as an unsolicited incoming connection.
not configured
Valid only when netsh is configuring a GPO by using the set store command.

NEW QUESTION: 3

Refer to the exhibit if R1 is acting as a DHCP server ,What action can you take to enable the pc to receive an ip address assignment from the DHCP server ?
A. Configure the IP helper-address command on R2 to use R1's ip address
B. Configure DHCP option 150 on R2
C. Configure the IP local pool command on R2
D. Configuration DHCP option 82 on R1
E. Configure the IP helper-address command on R1 to use R2's ip address
F. Configure the ip local pool command on R1
Answer: A
