NEW QUESTION: 1

A company runs a Windows Server host in a public subnet that is configured to allow a team of administrators to connect over RDP to troubleshoot issues with hosts in a private subnet. The host must be available at all times outside of a scheduled maintenance window, and needs to receive the latest operating system updates within 3 days of release.

What should be done to manage the host with the LEAST amount of administrative effort?

A. Run the host in a single-instance AWS Elastic Beanstalk environment. Configure the environment with a custom AMI to use a hardened machine image from AWS Marketplace. Apply system updates with AWS Systems Manager Patch Manager.

B. Run the host on AWS WorkSpaces. Use Amazon WorkSpaces Application Manager (WAM) to harden the host. Configure Windows automatic updates to occur every 3 days.

C. Run the host in AWS OpsWorks Stacks. Use a Chef recipe to harden the AMI during instance launch.

Use an AWS Lambda scheduled event to run the Upgrade Operating System stack command to apply system updates.

D. Run the host in an Auto Scaling group with a minimum and maximum instance count of 1. Use a hardened machine image from AWS Marketplace. Apply system updates with AWS Systems Manager Patch Manager.

Answer: B

Explanation:

B, least amount of effort.

AC: Does not make sense D: a lot more work than B.

NEW QUESTION: 2

CORRECT TEXT

The drug Betagan would be used _____.

Answer:

Explanation:

In the eye

NEW QUESTION: 3

Which quality management theorist focused on zero defects as the goal of performance improvement efforts?

- A. Kaizen
- B. Peters
- C. Crosby
- D. Deming

Answer: C

NEW QUESTION: 4

When you configure a shared extension in Cisco Configuration Professional, which two characteristics should be the same on both phones, so that the phones can successfully use a shared extension? (Choose two.)

- A. ephone-dn
- B. monitor mode
- C. MAC address
- D. user ID
- E. number

Answer: A,E

Explanation:

You can set up one or more lines with a shared-line appearance. A Cisco CallManager system considers a directory number to be a shared line if it appears on more than one device in the same partition. For example, if directory number 9600 on phone A is in the partition called Dallas and on phone B in the partition called Texas, that directory number does not represent a shared-line appearance. (Ensure the directory number 9600 for phone A and phone B are in the same partition; for example, Dallas.) In a shared-line appearance, for example, you can set up a shared line, so a directory number appears on line 1 of a manager phone and also on line 2 of an assistant phone. Another example of a shared line involves a single incoming 800 number that is set up to appear as line 2 on every sales representative phone in an office.

You can also choose to update a directory number and have the updates apply to all devices that

share the directory number.

The following information provides tips about and lists the restrictions for using shared-line appearances with Cisco CallManager.

Shared Line Tips

Use the following tips when configuring shared lines:

You create a shared-line appearance by assigning the same directory number and route partition to different devices.

If multiple devices share a line, each device name displays in the Associated Devices pane of the directory number in the Directory Number Configuration window in Cisco CallManager Administration.

If you change the Calling Search Space or Call Forward and Pickup settings on any device that uses the shared line, the changes apply to all devices that use that shared line.

To stop sharing a line appearance on a device, change the directory number or partition name for the line and update the directory number in the Directory Number Configuration window in Cisco CallManager Administration.

In the case of a shared-line appearance, Remove From Device removes the directory number on the current device only and does not affect other devices.

Most devices with a shared-line appearance can make or receive new calls or resume held calls

at the same time.

Incoming calls display on all devices that share a line, and anyone can answer the call. Only one call remains active at a time on a device.
