NEW QUESTION: 1

Which of the following processes is described in the statement below?

"It is the process of implementing risk response plans, tracking identified risks, monitoring residual risk, identifying new risks, and evaluating risk process effectiveness throughout the project."

- A. Identify Risks
- B. Monitor and Control Risks
- C. Perform Quantitative Risk Analysis
- D. Explanation:

Monitor and Control Risk is the process of implementing risk response plans, tracking identified risks, monitoring residual risk, identifying new risks, and evaluating risk process effectiveness throughout the project. It can involve choosing alternative strategies, executing a contingency or fallback plan, taking corrective action, and modifying the project management plan.

- E. Perform Qualitative Risk Analysis

Answer: B

Explanation:

is incorrect. This is the process of prioritizing risks for further analysis or action by accessing and combining their probability of occurrence and impact. Answer:C is incorrect. This is the process of determining which risks may affect the project and documenting their characteristics. Answer:B is incorrect. This is the process of numerically analyzing the effect of identified risks on overall project objectives.

NEW QUESTION: 2

A customer has complained that paint is peeling off a product recently purchased from a supplier. A team is formed in the supplier plant to solve the problem and follow these steps: {exhibit 534}

Which of the following methods best describes the problem-solving approach used by the team?

- A. Pareto analysis
- B. Brainstorming
- C. Five why's
- D. Fishbone analysis

Answer: D

NEW QUESTION: 3

- A. Option A
- B. Option D
- C. Option C
- D. Option B

Answer: A

Explanation:

The difference is that `IQueryable<T>` is the interface that allows LINQ-to-SQL (LINQ.-to-anything really) to work. So if you further refine your query on an `IQueryable<T>`, that query will be executed in the database, if possible.

For the `IEnumerable<T>` case, it will be LINQ-to-object, meaning that all objects matching the original query will have to be loaded into memory from the database.

Topic 2, ASP.NET MVC

Background

You are developing an ASP.NET MVC application in Visual Studio 2012 that will be used to process orders.

Business Requirements

The application contains the following three pages:

*A page that queries an external database for orders that are ready to be processed. The user can then process the order.

*A page to view processed orders.

*A page to view vendor information.

The application consumes three WCF services to retrieve external data.

Technical Requirements

Visual Studio Solution:

The solution contains the following four projects.

*ExternalQueue: A WCF service project used to communicate with the external order database.

*OrderProcessor: An ASP.NET MVC project used for order processing and logging order metadata.

*OrderUpload: A WCF service project used to submit order data to an external data source.

*Shipping: A WCF service project used to acquire shipping information.

ExternalQueue Project:

Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram.

The project contains two services defined in the following files.

- *IExternalQueueService.es

- *ExternalQueueService.svc.

The ExternalQueue.Helpers namespace contains a definition for a class named OrderNotFound Exception.

OrderProcessor Project:

Entity Framework is used for data access. The entities are defined in the ProcessedOrders.edmx file as shown in the following diagram.

The classes are contained in the OrderProcessor.Entities namespace. The project contains the following two controllers.

- *InboundQueueController.es

- *ProcessedOrderController.es

WCF service proxies to the ExternalQueue, Shipping and OrderUpload services have been generated by using the command prompt. The ExecuteCommandProcedure() method in the ExternalQueueService.svc file must run asynchronously.

The ProcessedOrderController controller has the following requirements.

The GetVendorPolicy() method must enforce a 10 minute absolute cache expiration policy.

The GetProcessedOrders() method must return a view of the 10 most recently processed orders.

OrderUpload Project:

The project contains two services defined in the following files:

- *IUploadCallbackService.es

- *UploadCallbackService.svc

Data Access is maintained in a file named UploadOrder.es.

Shipping Project:

Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram.

The Custom Tool property for ExternalOrders.edmx has been removed.

POCO classes for the Entity Model are located in the ShippingAddress.es file. The POCO entity must be loaded by using lazy loading.

The project contains two services defined in the following files.

- *IShippingService.es

- *ShippingService.svc.

The IShippingService contract must contain an operation that receives an order number as a parameter. The operation must return a class named ShippingInfo that inherits from a class named State.

Application Structure

NEW QUESTION: 4

Examine these parameters that are set for your Oracle 12c database instance:

Examine these steps:

- * Set the evolve task parameters.

- * Create the recommendations in the task by using the DBMS_SPM.IMPLEMENT_EVOLVE_TASK function.

- * Implement the recommendation in the task by using DBMS_SPM . IMPLEMENT_EVOLVE_TASK

function.

* Execute the evolve task by using the DBMS_SPM . EXECUTE_EVOLVE_TASK function.

* Report the task outcome by using the DBM. REPORT_EVOLVE TASK function.

Identify the minimum number of steps in the correct order to manually evolve SQL plans.
