#### **NEW QUESTION: 4**

There are often disadvantages when using mixed hardware, and uniform systems are highly advised. What are

three disadvantages of using validated yet mixed hardware? (Choose three.)

**A.** "Software only" solutions are inherently more secure, adhering to government regulations.

**B.** Validated yet "mixed" hardware systems may be supported by the specific original equipment manufacturers but software vendors require a master level services agreement.

**C.** "Hardware only" solutions require less latency for data aggregation.

**D.** Validated hardware does not mean smooth performance, which particularly applies to hardware that is

seldom chosen for the hardware part of the "software only" solution.

**E.** "Software only" HCI solutions often mean that HCI vendors do not have control over the hardware that

the consumer is using. The lack of control over the hardware can result in hardware not being security-compliant (usually the case with white box solutions) or not being optimally

configured for the

given HCI solution.

**F.** "Software only" solutions can result in a lack of simplicity for installation and maintenance.

While setup

and maintenance of an HCI solution might be simple you still need to configure and maintain the

hardware part, which is not orchestrated by the HCI solution.

**Answer: B,C,D**
