And our C_THR83_2105 study materials are always considered the guarantee to pass the exam, Perhaps you can ask the people around you that C_THR83_2105 study engine have really helped many people pass the exam.

Absolutely convenient.

NEW QUESTION: 1

ABC Corporationは、パスワードが危険にさらされる危険性があるため、システム管理者にトークンベースの認証を導入しました。トークンにはHMACカウンタベースのコードのセットがあり、使用されるまで有効です。このステートメントで説明されている認証メカニズムは次のうちどれですか。

- A. TOTP
- B. HOTP
- C. PAP
- D. CHAP

Answer: B

Explanation:

Explanation

The question states that the HMAC counter-based codes are valid until they are used.

These are

"one-time" use codes.

HOTP is an HMAC-based one-time password (OTP) algorithm.

HOTP can be used to authenticate a user in a system via an authentication server. Also, if some more steps are carried out (the server calculates subsequent OTP value and sends/displays it to the user who checks it against subsequent OTP value calculated by his token), the user can also authenticate the validation server.

Both hardware and software tokens are available from various vendors. Hardware tokens implementing OATH HOTP tend to be significantly cheaper than their competitors based on proprietary algorithms. Some products can be used for strong passwords as well as OATH HOTP.

Software tokens are available for (nearly) all major mobile/smartphone platforms.

NEW QUESTION: 2

Answer:

Explanation:

Explanation

Box 1: Create a recovery database.

A recovery database (RDB) is a special kind of mailbox database that allows you to mount and extract data from a restored mailbox database as part of a recovery operation. RDBs allow you to recover data from a backup or copy of a database without disrupting user access to current data.

Box 2: Restore the mailbox database.

After you create an RDB, you can restore a mailbox database into the RDB by using a backup application or by copying a database and its log files into the RDB folder structure.

Box 3: New-MailboxRestoreRequest with -Recovery

Use the New-MailboxRestoreRequest cmdlet to restore a mailbox or items from the recovery database to a production mailbox.

Note: A recovery database (RDB) is a special kind of mailbox database that allows you to mount and extract data from a restored mailbox database as part of a recovery operation. RDBs allow you to recover data from a backup or copy of a database without disrupting user access to current data.

After you create an RDB, you can restore a mailbox database into the RDB by using a backup application or by copying a database and its log files into the RDB folder structure. Then you can use the New-MailboxRestoreRequest cmdlet to extract data from the recovered database. Once extracted, the data can then be exported to a folder or merged into an existing mailbox. NEW QUESTION: 3

Is there a benefit to having the ViPR Analytics Pack installed concurrently with VMAX or VNX adapters in a vRealize Operations environment?

- A. No. The information provided will be the same since ViPR can interact with the underlying technology.
- B. Yes. The vRO health scores will improve by using performance data from VNX or VMAX adapters.
- C. No. If ViPR Analytics Pack is installed, neither VMAX nor VNX plug-ins are supported.
- D. Yes. If vRO cannot communicate with ViPR, it will use the VMAX or VNX adapters.

Answer: B
