Explanation

VERY IMPORTANT QUESTION FOR THE EXAM, PAY ATTENTION

1) To find the number of days between order date and shipping date, we will make use of a calculated field:

In the data pane, click on the dropdown arrow, and choose create calculated field.

Let's name this calculated field "ShippingDelay" (you can name it anything you want :))

2) Use the DATEDIFF() function, and pass it the arguments as follows:

'day' depicts that we want to calculate the number of DAYS between the two dates. The first argument is

'start\_date' which is the ORDER\_DATE (day the order was placed), the second argument is

'end\_date', which is the SHIP\_DATE (date the order was shipped). So by subtracting as follows: SHIP\_DATE - ORDER\_DATE, we can find the delay in shipping.

Click OK.

3) You should now have a new measure as follows:

4) Phew! The hard part is done! Now let's filter by Market to include only LATAM:

5) Drag Country to the view, and the new calculated field 'ShippingDelay' to SIZE on the Marks Shelf as follows:

\*You can also click on Show Text Labels to be sure that you're choosing the Largest value\*

Clearly, Mexico has the highest Shipping Delay!
