NEW QUESTION: 2
The ADMIN_EMP table has columns EMPNO, ENAME, DEPTNO, and SAL. It has a materialized view EMP_MV with a materialized log and an ENAME_IDX index on the ENAME column. You need to perform an online table redefinition on the ADMIN_EMP table to move it from the TBS1 tablespace to the TBS2 tablespace in the same schema. What action is required for the dependent objects when you perform online redefinition on the table?
A. The materialized view and materialized log should be dropped and all constraints disabled and re-created after the online table redefinition is complete.
B. The materialized view should have a fast refresh performed after the online table redefinition is completed.
C. The materialized view, materialized log, and the index should be dropped and re-created after the online table redefinition is complete.
D. The materialized view should have a complete refresh performed after the online table redefinition is completed.
Answer: D

NEW QUESTION: 3
A network engineer runs the following command:
nsconmsg -K /var/nslog/newnslog -s nsdebug_pe=1 -d oldconmsg
What is the engineer trying to check in the log?
A. Content-switching statistics
B. Bandwidth information
C. Memory utilization information
D. Load-balancing information
Answer: B
Explanation:
http://www.netscalerkb.com/netscaler-tricks-and-guides/nsconmsg-examples/?wap2;PHPSESSID=6bab876c08055dc69f12fb005869478f
Paul B:
Some of this probably duplicates my original post.... here's some bits stolen from the Netscaler Advanced course.....
Enter the following command in the shell to trim a newnslog file:
nsconmsg -K input_file -s time=DDMMMYYYY:HH:MM -k output_file -T seconds -d copy
Command example:
nsconmsg -K /var/nslog/newnslog -s time=19Jan2009:17:00 -k slice1_newnslog -T 3600 -d copy
This command writes newnslog entries from 5pm-6pm in the slice1_newnslog file.
Enter the following command in the shell to view the time span of the current newnslog file:
nsconmsg -K /var/nslog/newnslog -d setime
Enter the following command in the shell to display event information, such as entity up/down, alerts and configuration saves:
nsconmsg -K /var/nslog/newnslog -d event
Enter the following command in the shell to view console messages, which include IP address conflicts and duplex mismatch, in the current newnslog file:

nsconmsg -K /var/nslog/newnslog -d consmsg
Enter the following command in the shell to display memory utilization:
nsconmsg -s -K /var/nslog/newnslogConMEM=1 -d oldconmsg Enter the following command in the shell to display bandwidth information:
nsconmsg -K /var/nslog/newnslog -s nsdebug_pe=1 -d oldconmsg Enter the following command in the shell to display load-balancing information:
nsconmsg -K /var/nslog/newnslog -s ConLb=1 -d oldconmsg Enter the following command in the shell to view SSL stats for front-end connections:
nsconmsg -K /var/nslog/newnslog -s ConSSL=1 -d oldconmsg Enter the following command in the shell to view SSL stats for back-end connections:
nsconmsg -K /var/nslog/newnslog -s ConSSL=2 -d oldconmsg Enter the following command in the shell to view SSL stats for front- and back-end connections:
nsconmsg -K /var/nslog/newnslog -s ConSSL=3 -d oldconmsg Enter the following command in the shell to display monitoring statistics:
nsconmsg -K /var/nslog/newnslog *s ConMon=x *d oldconmsg This command gives basic information when x=1 and gives detailed information when x=2. Enter the following command in the shell to display content switching statistics:
nsconmsg -K /var/nslog/newnslog *s ConCSW=1 -d oldconmsg Enter the following command in the shell to view all non-zero totals in the current newnslog file:
nsconmsg -K /var/nslog/newnslog -d statswt0 | more
Enter the following command in the shell to view the average rates in the current newnslog file:
nsconmsg -K /var/nslog/newnslog *d current | more
Use -g to grep for specific counters of interest. For example:
nsconmsg -K /var/nslog/newnslog -g cpu -d statswt0 | more nsconmsg -K /var/nslog/newnslog -g arp *d current | more Enter following command in the shell to display CPU usage in the shell:
nsconmsg -K /var/nslog/newnslog -s totalcount=200 -g cpu_use -d current Enter the following command in the shell to display NIC information:
nsconmsg -K /var/nslog/newnslog -g nic -d current
And watch out for the parameters: a "-k" and a "-K" (lower- vs upper-case) have VERY different meanings!!!! For example the UPPERcase "-K" refers to an input file, whilst the lowercase "-k" refers to an output file.
Getting them wring could mean over-writing your log file!!! Ooops!

NEW QUESTION: 4
HOTSPOT
Which Web Services Security (WS-Security) specification maintains a single authenticated identity across multiple dissimilar environments? Click on the correct specification in the image below.

Answer:
Explanation:

Explanation:
WS-Federation
