### **NEW QUESTION: 1**

Refer to the exhibit.

Which statement about the output of the show flow-sampler command is true?

- A.** The sampler matched 10 packets, each packet randomly chosen from every group of 100 packets.
- B.** The sampler matched 10 packets, one packet every 100 seconds.
- C.** The sampler matched 10 packets, each one randomly chosen from every 100-second interval.
- D.** The sampler matched 10 packets, one packet every 100 packets.

**Answer: A**

### **NEW QUESTION: 2**

You execute the following piece of code with appropriate privileges:

User SCOTT has been granted the CREATE SESSION privilege and the MGR role.

Which two statements are true when a session logged in as SCOTT queries the SAL column in the view and the table? (Choose two.)

- A.** Data is never redacted for the EMP\_V.SAL column.
- B.** Data is redacted for the EMP\_V.SAL column only if the SCOTT session has the MGR role set.
- C.** Data is redacted for EMP.SAL column only if the SCOTT session has the MGR role set.
- D.** Data is redacted for the EMP.SAL column only if the SCOTT session does not have the MGR role set.
- E.** Data is redacted for the EMP\_V.SAL column only if the SCOTT session does not have the MGR role set.

**Answer: A,D**

Explanation:

Note:

- \* DBMS\_REDACT.FULL completely redacts the column data.
- \* DBMS\_REDACT.NONE applies no redaction on the column data. Use this function for development testing purposes. LOB columns are not supported.
- \* The DBMS\_REDACT package provides an interface to Oracle Data Redaction, which enables you to mask (redact) data that is returned from queries issued by low-privileged users or an application.
- \* If you create a view chain (that is, a view based on another view), then the Data Redaction policy also applies throughout this view chain. The policies remain in effect all of the way up through this view chain, but if another policy is created for one of these views, then for the

columns affected in the subsequent views, this new policy takes precedence.

### NEW QUESTION: 3

With Cisco ASA active/standby failover, what is needed to enable subsecond failover?

- A. Use redundant interfaces.
- B. Decrease the default unit failover polltime to 300 msec and the unit failover holdtime to 900 msec.
- C. Decrease the default number of monitored interfaces to 1.
- D. Enable the stateful failover interface between the primary and secondary Cisco ASA.

**Answer: B**

Explanation:

[http://www.cisco.com/en/US/docs/security/asa/asa83/asdm63/configuration\\_guide/ha\\_active\\_standby.html](http://www.cisco.com/en/US/docs/security/asa/asa83/asdm63/configuration_guide/ha_active_standby.html)

Configuring the Unit and Interface Health Poll Times

The adaptive security appliance sends hello packets out of each data interface to monitor interface health. The appliance sends hello messages across the failover link to monitor unit health. If the adaptive security appliance does not receive a hello packet from the corresponding interface on the peer unit for over half of the hold time, then the additional interface testing begins. If a hello packet or a successful test result is not received within the specified hold time, the interface is marked as failed. Failover occurs if the number of failed interfaces meets the failover criteria.

Decreasing the poll and hold times enables the adaptive security appliance to detect and respond to interface failures more quickly, but may consume more system resources. Increasing the poll and hold times prevents the adaptive security appliance from failing over on networks with higher latency.
