NEW QUESTION: 1

You need to configure the app to meet the requirements.

Which object properties should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/control-screen>

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-form>

NEW QUESTION: 2

Which of the following is the most reliable authentication method for remote access?

- A.** Fixed callback system
- B.** Synchronous token
- C.** Combination of callback and caller ID
- D.** Variable callback system

Answer: B

Explanation:

Explanation/Reference:

A Synchronous token generates a one-time password that is only valid for a short period of time. Once the password is used it is no longer valid, and it expires if not entered in the acceptable time frame.

Incorrect Answers:

A: Although variable callback systems are more flexible than fixed callback systems, the system assumes the identity of the individual unless two-factor authentication is also implemented.

C: Callback systems authenticate a person, but anyone can pretend to be that person. They are tied to a specific place and phone number, which can be spoofed by implementing call-forwarding.

D: The caller ID and callback functionality provides greater confidence and auditability of the caller's identity. However, unless combined with strong authentication, any individual at the location could obtain access.

NEW QUESTION: 3

A network technician is assisting a user who is having problems accessing a particular website. Other users are reporting that the website is accessible outside of the office. The technician suspects the problem is with the company's firewall. Which of the following should the technician use to troubleshoot?

- A. WiFi analyzer
- B. Packet sniffer
- C. Dig
- D. Bandwidth speed tester

Answer: B
