NEW QUESTION: 1

A US-based sneaker retail company launched its global website. All the transaction data is stored in Amazon RDS and curated historic transaction data is stored in Amazon Redshift in the us-east-1 Region. The business intelligence (BI) team wants to enhance the user experience by providing a dashboard for sneaker trends.

The BI team decides to use Amazon QuickSight to render the website dashboards. During development, a team in Japan provisioned Amazon QuickSight in ap-northeast-1. The team is having difficulty connecting Amazon QuickSight from ap-northeast-1 to Amazon Redshift in us-east-1.

Which solution will solve this issue and meet the requirements?

- A.** Create an Amazon Redshift endpoint connection string with Region information in the string and use this connection string in Amazon QuickSight to connect to Amazon Redshift.
- B.** In the Amazon Redshift console, choose to configure cross-Region snapshots and set the destination Region as ap-northeast-1. Restore the Amazon Redshift Cluster from the snapshot and connect to Amazon QuickSight launched in ap-northeast-1.
- C.** Create a new security group for Amazon Redshift in us-east-1 with an inbound rule authorizing access from the appropriate IP address range for the Amazon QuickSight servers in ap-northeast-1.
- D.** Create a VPC endpoint from the Amazon QuickSight VPC to the Amazon Redshift VPC so Amazon QuickSight can access data from Amazon Redshift.

Answer: D

NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains a

domain

controller named DC1 that runs Windows Server 2012.

You have a Group Policy object (GPO) named GPO1 that contains several custom Administrative templates.

You need to filter the GPO to display only settings that will be removed from the registry when the GPO falls out of scope.

The solution must only display settings that are either enabled or disabled and that have a comment.

How should you configure the filter? To answer, select the appropriate options below. Select three.

- A. Set Configured to: Yes
- B. Set Commented to: No
- C. Set Configured to: No
- D. Set Commented to: Any
- E. Set Managed to: No
- F. Set Commented to: Yes
- G. Set Configured to: Any
- H. Set Managed to: Any
- I. Set Managed to: Yes

Answer: F,G,I

Explanation:

Las plantillas administrativas son configuraciones de directiva basadas en el Registro que aparecen en el nodo Plantillas administrativas de los nodos Configuración del equipo y Configuración de usuario. Esta jerarquía se crea cuando la Consola de administración de directivas de grupo lee los archivos de plantillas administrativas basados en XML (.adm).

<http://technet.microsoft.com/es-es/library/cc732634.aspx>

Hay dos tipos de configuraciones de directiva de las plantillas administrativas: Administrada y No

administrada. El servicio de directiva de grupo controla la configuración de directiva Administrada y quita una configuración de directiva cuando ya no este dentro del ámbito del usuario o el equipo.

El servicio de directiva de grupo no controla la configuración de directiva no administrada. Estas configuraciones de directiva son persistentes. El servicio de directiva de grupo no quita una configuración de directiva no administrada, ni siquiera si no esta dentro del ámbito del usuario o el equipo. Normalmente, estos tipos de configuraciones de directiva se usan para establecer preferencias para los componentes del sistema operativo no habilitados para la directiva. También puede usar la configuración de directiva no administrada para la configuración de aplicaciones.

El filtro de propiedades Administrada tiene tres estados: Cualquiera, Si y No. Si se establece este filtro de propiedades en Cualquiera, la Consola de administración de directivas de grupo mostrara todas las configuraciones de directiva de plantillas administrativas. Establecer este filtro de propiedades en Si hace que el editor solo muestre las configuraciones de directivas de las plantillas administrativas administradas y oculte las no administradas. Establecer este filtro de propiedades en No hace que el editor solo muestre las configuraciones de directivas de las plantillas administrativas no administradas y oculte las administradas.

El filtro de propiedades Configurada tiene tres estados: Cualquiera, Si y No. Si se establece este filtro de propiedades en Cualquiera, la Consola de administración de directivas de grupo mostrara todas las configuraciones de directiva de plantillas administrativas; es el valor predeterminado de este filtro. Establecer este filtro de propiedades en Si hace que el editor solo muestre las configuraciones de directiva de plantillas administrativas configuradas y oculte las no configuradas. Establecer este filtro de propiedades en No hace que el editor solo

muestre las configuraciones de directiva de plantillas administrativas no configuradas y oculte las configuradas.

El filtro de propiedades Comentado tiene tres estados: Cualquiera, Si y No. Si se establece este filtro de propiedades en Cualquiera, el Editor de administracion de directivas de grupo mostrara todas las configuraciones de directiva de plantillas administrativas; es el valor predeterminado de este filtro. Establecer este filtro de propiedades en Si hace que el editor solo muestre la configuraciones de directiva de plantillas administrativas comentadas y oculte las que no tienen comentarios. Establecer este filtro de propiedades en No hace que el editor solo muestre las configuraciones de directiva de plantillas administrativas sin comentarios y oculte las que tienen comentarios.

<http://technet.microsoft.com/es-es/library/cc731054.aspx>

A: Set Managed to: Yes There are two kinds of Administrative Template policy settings: Managed and Unmanaged. The Group Policy Client service governs Managed policy settings and removes a policy setting when it is no longer within scope of the user or computer. The Group Policy Client service does not govern unmanaged policy settings. These policy settings are persistent. The Group Policy Client service does not remove unmanaged policy settings, even if the policy setting is not within scope of the user or computer. Typically, you use these types of policy settings to configure options for operating system components that are not policy enabled. You can also use unmanaged policy settings for application settings.

F: Set Configured to: Any

We want to display both settings that are enable and disabled.

G: Set Commented to: Yes

Only settings that are commented should be displayed.

Note: Filter with Property Filters The Local Group Policy Editor allows you to change the criteria for displaying Administrative Template policy settings. By default, the editor displays all policy settings, including unmanaged policy settings. However, you can use property filters to change how the Local Group Policy Editor displays Administrative Template policy settings. There are three inclusive property filters that you can use to filter Administrative Templates. These property filters include:

*Managed

*Configured

*Commented

NEW QUESTION: 3

Your company has a very specific requisition posting strategy. Each requisition must be posted only internally for the first two weeks, and then externally thereafter. To assist recruiters, these options can be set as defaults. Which two steps must you follow to put this into effect? (Choose two.)

A. Access and adjust Application Flow Properties.

B. Access and adjust Recruiting Administration Settings.

C. Access and adjust Career Section Settings.

D. Access External Career Section Properties and adjust Default Posting Options.

E. Access Internal Career Section Properties and adjust Default Posting Options.

Answer: A,E

NEW QUESTION: 4

ある会社には、Arubaワイヤレスアーキテクチャに多くの7220コントローラーがあります。ネットワーク管理者は、トラフィック分析ダッシュボードを使用して、ワイヤレスユーザーがどのタイプ

のアプリケーションを使用しているかを監視したいと考えています。

この実装には何が必要ですか？

A. WLANは、復号化トンネル転送オプションを使用する必要があります。

B. AirmatchとClientMatchを有効にする必要があります。

C.

ファイアウォールポリシーには、アプリケーションフィルタリングルールを含める必要があります。

D. ソリューションにはアクティブなPEFNGライセンスが必要です。

Answer: D
