NEW QUESTION: 1

What can cause the state table of a stateful firewall to update? (choose two)

- A. When a connection's timer has expired within state table
- B. When rate-limiting is applied
- C. When outbound packets forwarded to outbound interface
- D. When a connection is created
- E. When packet is evaluated against the outbound access list and is denied

Answer: A,D

Explanation:

Explanation

Stateful inspection monitors incoming and outgoing packets over time, as well as the state of the connection, and stores the data in dynamic state tables. This cumulative data is evaluated, so that filtering decisions would

not only be based on administrator-defined rules, but also on context that has been built by previous

connections as well as previous packets belonging to the same connection.

Entries are created only for TCP connections or UDP streams that satisfy a defined security policy.

In order to prevent the state table from filling up, sessions will time out if no traffic has passed for a certain

period. These stale connections are removed from the state table.
