Which application protocol is in this PCAP file?
A. SSH
B. HTTP
C. TCP
D. SSL
Answer: D
Explanation:
Explanation
If we are looking at the OSI model then SSL/TLS would sit at the presentation layer as it provides encryption services, but SSL/TLS also establishes an encrypted communication

session therefore SSL/TLS is also seen as part of session layer (layer 5 of the OSI model). It will also guarantee the authenticity of a Server by properly authenticating the required authentication challenges.

Authentication works at Layer 7.If we are referring to the TCP/IP model, then it is entirely acceptable that SSL is seen as an application layer protocol as layers 5,6 & 7 of the OSI are mapped to the Application layer in TCP/IP model.TCP is not an application layer protocol - it is seen as the Transport layer protocol in both models.

Processing: Use 2 Dv2-series Vms in a new scale set.
The processing tier must support high volume CPU loads at peak times throughout the year.

Dv2-series, a follow-on to the original D-series, features a more powerful CPU. The Dv2- series CPU is about 35% faster than the D-series CPU.

Automatic scaling of virtual machines in a scale set is the creation or deletion of machines in the set as needed to match performance requirements. As the volume of work grows, an application may require additional resources to enable it to effectively perform tasks.
