The AWS Documentation mentions the following

Amazon S3 is integrated with AWS CloudTrail. CloudTrail is a service that captures specific API calls made to Amazon S3 from your AWS account and delivers the log files to an Amazon S3 bucket that you specify. It captures API calls made from the Amazon S3 console or from the Amazon S3 API.

Using the information collected by CloudTrail, you can determine what request was made to Amazon S3, the source IP address from which the request was made, who made the request when it was made, and so on Options A,C and D are invalid because these services cannot be used to get the source IP address of the calls to S3 buckets For more information on Cloudtrail logging, please refer to the below Link:
