### NEW QUESTION: 2

Amazon EC2インスタンスはAWS

APIにアクセスする必要があるため、既存のサブネットにNATゲートウェイを作成しました。  
AWS APIにアクセスしようとする失敗します。

アクセスを妨げる可能性があるもの

- A. NATゲートウェイに仮想プライベートゲートウェイへのルートがありません
- B. インスタンスはNATゲートウェイと同じサブネットにありません
- C. NATゲートウェイサブネットにインターネットゲートウェイへのルートがありません
- D. インスタンスにはNATゲートウェイへのアクセスを許可するIAMロールが必要です

**Answer: C**

### NEW QUESTION: 3

DRAG DROP

You have a database named DB1 that contains the following tables: Customer, CustomerToAccountBridge, and CustomerDetails. The three tables are part of the Sales schema. The database also contains a schema named Website. You create the Customer table

by running the following Transact-SQL statement:

The value of the CustomerStatus column is equal to one for active customers. The value of the Account1Status and Account2Status columns are equal to one for active accounts. The following table displays selected columns and rows from the Customer table.

You plan to create a view named Website.Customer and a view named Sales.FemaleCustomers. Website .Customer must meet the following requirements:

- 1 . Allow users access to the CustomerName and CustomerNumber columns for active customers.
- 2 . Allow changes to the columns that the view references. Modified data must be visible through the view.
- 3 . Prevent the view from being published as part of Microsoft SQL Server replication.

Sales.Female.Customers must meet the following requirements:

- 1 . Allow users access to the CustomerName, Address, City, State and PostaiCode columns.
- 2 . Prevent changes to the columns that the view references.
- 3 . Only allow updates through the views that adhere to the view filter.

You have the following stored procedures: spDeleteCustAcctRelationship and spUpdateCustomerSummary. The spUpdateCustomerSummary stored procedure was created by running the following Transacr-SQL statement:

You run the spUpdateCustomerSummary stored procedure to make changes to customer account summaries. Other stored procedures call the spDeleteCustAcctRelationship to delete records from the CustomerToAccountBridge table.

When a procedure calls spDeleteCustAcctRelationship, if the calling stored procedures has already started an active transaction, all the detections made by the spDeleteCustAccRelationship stored procedure must be committed by the caller; otherwise changes must be committed within the spDeleteCustAcctRelationship stored procedure. If any error occurs during the delete operation, only the deletes made by the soDeleteCustACCTRelationships stored procedure must be rolled back and the status must be updated.

You need to complete the stored procedure to ensure all the requirements are met.

How should you complete the procedure? To answer, drag the Transact-SQL segments to the correct location. Each transact-SQL segment may be used once, more than once or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.
