NEW QUESTION: 1

Which of the following types of audit constructs a risk profile for existing and new projects?

- A. Client/Server, Telecommunications, Intranets, and Extranets audits
- B. Innovative comparison audit
- C. Technological innovation process audit
- D. Technological position audit

Answer: C

Explanation:

Various authorities have created differing taxonomies to distinguish the various types of IT audits. Goodman & Lawless state that there are three specific systematic approaches to carry out an IT audit: Technological innovation process audit: This audit constructs a risk profile for existing and new projects. The audit will assess the length and depth of the company's experience in its chosen technologies, as well as its presence in relevant markets, the organization of each project, and the structure of the portion of the industry that deals with this project or product, organization and industry structure. Innovative comparison audit: This audit is an analysis of the innovative abilities of the company being audited in comparison to its competitors. This requires examination of company's research and development facilities, as well as its track record in actually producing new products. Technological position audit: This audit reviews the technologies that the business currently has and that it needs to add. Technologies are characterized as being either "base", "key", "pacing", or "emerging". Answer D is incorrect. These are the audits to verify that controls are in place on the client (computer receiving services), server, and on the network connecting the clients and servers.

NEW QUESTION: 2

A customer has requested to have Access Logix disabled on a VNX array. How would you

accomplish this?

- A. Use Navisphere Secure CLI to run sc_off.
- B. Remove all hosts and storage from the storage groups.
- C. De-register all hosts from the VNX.
- D. Remove the check mark in the Unisphere GUI for storage groups.

Answer: A

NEW QUESTION: 3

Which of the following policies are considered as a good starting point while designing a wireless security policy document? Each correct answer represents a complete solution. Choose all that apply.

- A. Functional security policy
- B. Rogue AP policy
- C. General security policy
- D. Protocol policy

Answer: A,B,C

Explanation:

The policies that are considered as a good starting point for designing a wireless security policy document are as follows: Functional security policy: A general security policy is defined first while establishing a wireless security policy. It establishes why wireless security is important for any organization. The general security policy defines the following items: Statement of authority: It defines who has put the wireless security policy. Applicable audience: It defines the audience such as employees, visitors, etc. to whom the policy applies. Violation reporting procedures: It defines the violation procedures for the wireless security policy. Risk assessment and threat analysis: It defines what financial impact will be on the company if any attack occurs to be successful. Security auditing: It defines the internal and external auditing procedures. Rogue AP policy: Rogue AP policy states that no end users has permission to install their own wireless devices on the corporate network. A wireless device includes access point, wireless routers, wireless cards, etc. This policy should be strictly enforced. General security policy: Functional security policy shows how the basic security services are addressed for each resource in the system. It defines the technical aspects of the wireless security and establishes how to secure the wireless network. Answer option C is incorrect. The protocol policy is not considered while designing a wireless security policy document.
