NEW QUESTION: 2

Which of the following scanning techniques helps to ensure that the standard software configuration is currently with the latest security patches and software, and helps to locate uncontrolled or unauthorized software?

- A. Discovery Scanning
- B. Port Scanning
- C. Workstation Scanning
- D. Server Scanning

Answer: C

Explanation:

Workstation scanning provides help to ensure that the standard software configuration exists with the most recent security patches and software. It helps to locate uncontrolled or unauthorized software. A full workstation vulnerability scan of the standard corporate desktop configuration must be implemented on a regularly basis. Answer B is incorrect. The discovery scanning technique is used to gather adequate information regarding each network device to identify what type of device it is, its operating system, and if it is running any externally vulnerable services, like Web services, FTP, or email. Answer C is incorrect. A full server vulnerability scan helps to determine if the server OS has been configured to the corporate

standards and identify if applications have been updated with the latest security patches and software versions. Answer A is incorrect. Port scanning technique describes the process of sending a data packet to a port to gather information about the state of the port.
