Some candidates are afraid that they can't receive our HPE1-H01 certification torrent materials fast, or after payment we will neglect them or ignore them.

### **NEW QUESTION: 1**

In an RSVP-based MPLS network, which ERO type specifies the exact order of routers through which an LSP must travel, without consulting the IGP?

- A. static hop
- B. strict hop
- C. next hop
- D. loose hop

**Answer: B**

Explanation:

Explanation/Reference:

When a strict hop is configured, it identifies an exact path through which the LSP must be routed. Strict-hop EROs (Explicit Route Objects) specify the exact order of the routers through which the RSVP messages are sent.

Incorrect Answers:

A: When a loose hop is configured, it identifies one or more transit LSRs through which the LSP must be routed.

The network IGP determines the exact route from the inbound router to the first loose hop, or from one loose hop to the next.

The loose hop specifies only that a particular LSR be included in the LSP.
