NEW QUESTION: 1

展示を参照してください。 FastEthernet0 /
2に接続されているホストがインターネットにアクセスできるようにするコマンドはどれですか。
A. ip nat outside source list 10 interface FastEthernet0/2 overload
B. ip nat inside source list 10 interface FastEthernet0/2 overload
C. ip nat inside source list 10 interface FastEthernet0/1 overload
D. ip nat outside source static 209.165.200.225 10.10.10.0 overload
Answer: C

NEW QUESTION: 2
Transmitting redundant information with each character or frame to facilitate detection and correction of errors is called a:
A. cyclic redundancy check.
B. forward error control.
C. feedback error control.
D. block sum check.
Answer: B
Explanation:
Explanation/Reference:
Explanation:
Forward error control involves transmitting additional redundant information with each character or frame to facilitate detection and correction of errors, in feedback error control, only enough additional information is transmitted so the receiver can identify that an error has

occurred.
Choices B and D are both error detection methods but not error correction methods. Block sum check is an extension of parity check wherein an additional set of parity bits is computed for a block of characters. A cyclic redundancy check is a technique wherein a single set of check digits is generated, based on the contents of the frame, for each frame transmitted.

NEW QUESTION: 3
Drag and drop to the characteristics of networking from the left onto the correct networking types on the right.

Answer:
Explanation:

NEW QUESTION: 4
You create a resource group named RG1 in Azure Resource Manager.
You need to prevent the deletion of the resources in RG1.
Which setting should you use? To answer, select the appropriate setting in the answer area.

Answer:
Explanation:

Explanation

You can configure a lock on a resource group to prevent the accidental deletion.
As an administrator, you may need to lock a subscription, resource group, or resource to prevent other users in your organization from accidentally deleting or modifying critical resources. You can set the lock level to CanNotDelete or ReadOnly. In the portal, the locks are called Delete and Read-only respectively.
* CanNotDelete means authorized users can still read and modify a resource, but they can't delete the resource.
* ReadOnly means authorized users can read a resource, but they can't delete or update the resource.
Applying this lock is similar to restricting all authorized users to the permissions granted by the Reader role.
