NEW QUESTION: 1

A. Option D
B. Option A
C. Option B
D. Option C
Answer: B
Explanation:
Explanation
You can use the container_commands key to execute commands that affect your application source code.
Container commands run after the application and web server have been set up and the application version archive has been extracted, but before the application version is deployed. Non-container commands and other customization operations are performed prior to the application source code being extracted.
You can use leader_only to only run the command on a single instance, or configure a test to only run the command when a test command evaluates to true. Leader-only container commands are only executed during environment creation and deployments, while other commands and server customization operations are performed every time an instance is provisioned or updated. Leader-only container commands are not executed due to launch configuration changes, such as a change in the AMI Id or instance type. For more information on customizing containers, please visit the below URL:
* http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/customize-containers-ec2.html

NEW QUESTION: 2

A customer is implementing a single ShadowImagecopy of 10 TB of storage on a VSP.
