Customer First Policy is the object of the company.

NEW QUESTION: 1
Your network contains an Active Directory forest that has two domains named contoso.com and europe.contoso.com.
The forest contains five servers. The servers are configured as shown in the following table.

You plan to manage the DHCP settings and the DNS settings centrally by using IP Address Management (IPAM).
You need to ensure that you can use IPAM to manage the DHCP and DNS settings in both domains. The solution must use the minimum amount of administrative effort.
What should you do?
A. Upgrade DCE1 and DCE2 to Windows Server 2012, and then install the IP Address Management (IPAM) Server feature. Run the Invoke-IpamGpoProvisioning cmdlet for each domain.
B. Upgrade DCE1 and DCE2 to Windows Server 2012, and then install the IP Address Management (IPAM) Server feature. Run the Set-IpamConfiguration cmdlet for each domain.
C. Upgrade DC1 and DC2 to Windows Server 2012, and then install the IP Address Management (IPAM) Server feature. Run the Invoke-IpamGpoProvisioning cmdlet for each domain.
D. Upgrade DC1 and DC2 to Windows Server 2012, and then install the IP Address Management (IPAM) Server feature. Run the Set-IpamConfiguration cmdlet for each domain.
Answer: A
Explanation:
* You can use IPAM to manage DHCP servers running on Windows Server 2008 R2 and above.
Here DCE1 and DCE2 are running Windows 2003, so they need to be upgraded to Windows Server 2008 R2 or above.
* Invoke-IpamGpoProvisioning
Creates and links group policies in the specified domain for provisioning required access settings on the servers managed by the computer running the IP Address Management (IPAM) server.
Incorrect:
Not C: DC1 and DC2 do not need to be upgraded as IPAM can manage DHCP servers running on Windows Server 2008
R2 and above.
Not A, Not D: Set-IpamConfiguration
Sets the configuration for the computer running the IP Address Management (IPAM) server, including the TCP port number over which the computer running the IPAM Remote Server Administration Tools (RSAT) client connects with the computer running the IPAM server.
