NEW QUESTION: 1
オンプレミスからAWSクラウドにハイパフォーマンスコンピューティング（HPC）アプリケーションとデータを移行したいと考えている企業は、ホットパフォーマンスパラレルストレージを備えたオンプレミスの階層型ストレージを使用して、アプリケーションの定期的な実行中にアプリケーションをサポートし、より経済的ですアプリケーションがアクティブに実行されていないときにデータを保持するコールドストレージアプリケーションのストレージニーズをサポートするためにソリューションアーキテクトが推奨するソリューションの組み合わせはどれですか。（2つ選択）
A. Amazon EFS for cold data storage
B. Amazon S3 for cold data storage
C. Amazon FSx for Lustre for high-performance parallel storage
D. Amazon FSx for Windows for high-performance parallel storage
E. Amazon S3 for high-performance parallel storage
Answer: B,C
Explanation:
Amazon S3
Companies today need the ability to simply and securely collect, store, and analyze their data at a massive scale. Amazon Simple Storage Service (S3) is object storage built to store and Amazon Web Services - AWS Partner Network High Performance Computing Storage Options retrieve any amount of data from anywhere - websites and mobile applications, corporate applications, and data from Internet of Things (IoT) sensors or devices3. Amazon S3 delivers 99.999999999% durability, and stores data for millions of applications used by market leaders in every industry. Amazon S3 also provides comprehensive security and compliance capabilities that meet even the most stringent regulatory requirements, giving customers flexibility in the way they manage data for cost optimization, access control, and compliance.

Amazon S3's query-in-place functionality allows you to run powerful analytics directly on your data at rest in Amazon S3. Lastly, Amazon S3 is the most supported cloud storage service available, with solutions available from a large community of third-party solution providers, systems integrator partners, and other AWS services.

Amazon S3 is a highly scalable and high durable storage platform for HPC applications that support an object interface. Amazon S3 includes many features, such as lifecycle management, that allow you to move less frequently accessed down to lower storage tiers for more cost effective solution4. Even if your HPC application does not directly support Amazon S3, you can use Amazon S3 as a data repository to hold your dataset, which can be ingested into your processing file system. There also are APN Partner solutions that provide traditional filesystem access via SMB, NFS, and POSIX clients while using Amazon S3 as part of their solution for data storage and/or data protection.

Amazon FSx for Lustre

Amazon FSx for Lustre is a new, fully managed service provided by AWS based on the Lustre file system. Amazon FSx for Lustre provides a high-performance file system optimized for fast processing of workloads such as machine learning, high performance computing (HPC), video processing, financial modeling, and electronic design automation (EDA).

FSx for Lustre allows customers to create a Lustre filesystem on demand and associate it to an Amazon S3 bucket. As part of the filesystem creation, Lustre reads the objects in the buckets and adds that to the file system metadata. Any Lustre client in your VPC is then able to access the data, which gets cached on the high-speed Lustre filesystem. This is ideal for HPC workloads, because you can get the speed of an optimized Lustre file system without having to manage the complexity of deploying, optimizing, and managing the Lustre cluster. Additionally, having the filesystem work natively with Amazon S3 means you can shut down the Lustre filesystem when you don't need it but still access objects in Amazon S3 via other AWS Services. FSx for Clustre also allows you to also write the output of your HPC job back to Amazon S3
