NEW QUESTION: 1

Phishing is typically carried out by email spoofing or instant messaging and it often directs users to enter details at a fake website whose look and feel are almost identical to the legitimate one.

Phishing is an example of social engineering techniques used to deceive users, and exploits the poor usability of current web security technologies. Attempts to deal with the growing number of reported phishing incidents include legislation, user training, public awareness, and technical security measures.

What characteristics do phishing messages often have that may make them identifiable?

- A. Suspiciously good grammar and capitalization
- B. Suspicious attachments
- C. They trigger warning pop-ups
- D. Invalid email signatures or contact information

Answer: C

NEW QUESTION: 2
