NEW QUESTION: 1

Your application consists of three Oracle Cloud Infrastructure compute instances running behind a public load balancer. You have configured the load balancer to perform health checks on these instances, but one of the three instances fails to pass the configured health check. Which of the following action will the load balancer perform?

- A. Terminate the instance that failed health check
- B. Remove the instance that failed the health check from the backend set
- C. Stop the instances that failed health check
- D. Stop sending traffic to the instance that failed health check

Answer: D

Explanation:

Explanation

health check A test to confirm the availability of backend servers. A health check can be a request or a connection attempt. Based on a time interval you specify, the load balancer applies the health check policy to continuously monitor backend servers. If a server fails the health check, the load balancer takes the server temporarily out of rotation. If the server subsequently passes the health check, the load balancer returns it to the rotation.

You configure your health check policy when you create a backend set. You can configure TCP-level or HTTP-level health checks for your backend servers.

- TCP-level health checks attempt to make a TCP connection with the backend servers and validate the response based on the connection status.

- HTTP-level health checks send requests to the backend servers at a specific URI and validate the response based on the status code or entity data (body) returned.

The service provides application-specific health check capabilities to help you increase availability and reduce your application maintenance window.

NEW QUESTION: 2

AWS에서 백업 키를 관리하는 기존 CMK 키에 대해 자동 키 회전을 활성화하면 키가 얼마나 오래 회전 한 후? 선택 해주세요:

- A. 365 일 후
- B. 30 일 후
- C. 128 일 후
- D. 3 년 후

Answer: D

Explanation:

Explanation

The AWS Documentation states the following

* AWS managed CM Ks: You cannot manage key rotation for AWS managed CMKs. AWS KMS automatically rotates AWS managed keys every three years (1095 days).

Note: AWS-managed CMKs are rotated every 3yrs, Customer-Managed CMKs are rotated every 365-days from when rotation is enabled.

Option A, B, C are invalid because the dettings for automatic key rotation is not changeable.

For more information on key rotation please visit the below URL

<https://docs.aws.amazon.com/kms/latest/developereuide/rotate-keys.html>

AWS managed CMKs are CMKs in your account that are created, managed, and used on your behalf by an AWS service that is integrated with AWS KMS. This CMK is unique to your AWS account and region. Only the service that created the AWS managed CMK can use it You can

login to your IAM dashboard. Click on "Encryption Keys" You will find the list based on the services you are using as follows:

- * aws/elasticfilesystem 1 aws/lightsail
- * aws/s3
- * aws/rds and many more

Detailed Guide: KMS

You can recognize AWS managed CMKs because their aliases have the format aws/service-name, such as aws/redshift. Typically, a service creates its AWS managed CMK in your account when you set up the service or the first time you use the CMK. The AWS services that integrate with AWS KMS can use it in many different ways. Some services create AWS managed CMKs in your account. Other services require that you specify a customer managed CMK that you have created. And, others support both types of CMKs to allow you the ease of an AWS managed CMK or the control of a customer-managed CMK. Rotation period for CMKs is as follows:

- * AWS managed CMKs: 1095 days
- * Customer managed CMKs: 365 days

Since the question mentions about "CMK where backing keys is managed by AWS", its Amazon(AWS) managed and its rotation period turns out to be 1095 days{every 3 years) For more details, please check below AWS Docs:

<https://docs.aws.amazon.com/kms/latest/developerguide/concepts.html>

The correct answer is: After 3 years
