### NEW QUESTION: 2

A company is developing a mobile app for field service employees using Azure App Service Mobile Apps as the backend.

The company's network connectivity varies throughout the day. The solution must support offline use and synchronize changes in the background when the app is online app.

You need to implement the solution.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

## Explanation

Box 1: `var todoTable = client GetSyncTable<TodoItem>()`

To setup offline access, when connecting to your mobile service, use the method `GetSyncTable` instead of `GetTable` (example):

`IMobileServiceSyncTable todoTable = App.MobileService.GetSyncTable();` / Box 2: `await todoTable.PullAsync("allTodoItems",todo.Table.CreateQuery());` Your app should now use `IMobileServiceSyncTable` (instead of `IMobileServiceTable`) for CRUD operations.

This will save changes to the local database and also keep a log of the changes. When the app is ready to synchronize its changes with the Mobile Service, use the methods `PushAsync` and `PullAsync` (example):

`await App.MobileService.SyncContext.PushAsync();`

`await todoTable.PullAsync();`
