NEW QUESTION: 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct

solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are configuring the year-end setup in Dynamics 365 for Finance and Operations.

You need to configure the year-end setup to meet the following requirements:

The accounting adjustments that are received in the first quarter must be able to be posted in to the previous year's Period 13.

The fiscal year closing can be run again, but only the most recent closing entry will remain in the transactions.

All dimensions from profit and loss must carry over into the retained earnings.

All future and previous periods must have an On Hold status.

Solution:

Configure General ledger parameters.

- Set the Delete close of year transactions option to Yes.
- Set the Create closing transactions during transfer option to Yes.
- Set the Fiscal year status to permanently closed option to No.

Define the Year-end close template.

- Designate a retained earnings main account for each legal entity.
- Set the Financial dimensions will be used on the Opening transactions option to No.
- Set the Transfer profit and loss dimensions' option to Close All.

Set future Ledger periods to a status of On Hold.

Does the solution meet the goal?

NEW QUESTION: 4

Identify the two ways in which the ZFS Storage Appliance provides data integrity.

- A.** Parallel reads and writes are performed to the same file.
- B.** Every block is checksummed in server memory to prevent silent data corruption.
- C.** fsck(1M) on the ZFS file system is conducted every 5 minutes.
- D.** ZFS operations are copy-on-write transactions, so the on-disk state is always valid.

Answer: B,D

Explanation:

Explanation/Reference:

Explanation:

All operations are copy-on-write transactions, so the on-disk state is always valid. There is no need to fsck (1M) a ZFS filesystem, ever.

Every block is checksummed to prevent silent data corruption, and the data is self-healing in mirrored or RAID configurations. When one copy is damaged, ZFS detects it (via the checksum) and uses another copy to repair it.
