NEW QUESTION: 1

SIMULATION

This is a lab or performance-based testing (PBT) section.

The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please, note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

To start the lab

You may start lab by clicking the Next button

To connect to the Azure portal, type <https://portal.azure.com> in the browser address bar.

You need to deploy an Azure load balancer named lb1016 to your Azure subscription. The solution must meet the following requirements:

Support the load balancing of IP traffic from the Internet to Azure virtual machines connected to

VNET1016subnet0.

Provide a Service Level Agreement (SLA) of 99.99 percent availability for the Azure virtual machines.

Minimize Azure-related costs.

What should you do from the Azure portal?

To complete this task, you do NOT need to wait for the deployment to complete. Once the deployment starts in Azure, you can move to the next task.

Answer:

Explanation:

See explanation below.

Explanation/Reference:

Explanation:

Step 1:

On the top left-hand side of the screen, click Create a resource > Networking > Load Balancer.

Step 2:

In the Create a load balancer page enter these values for the load balancer:

myLoadBalancer - for the name of the load balancer.

Internal - for the type of the load balancer.

Basic - for SKU version.

Microsoft guarantees that apps running in a customer subscription will be available 99.99% of the time.

VNET1016subnet0 - for subnet that you choose from the list of existing subnets.

Step 3: Accept the default values for the other settings and click Create to create the load balancer.

NEW QUESTION: 2

You are the project manager of GHT project. You and your team have developed risk responses for those risks with the highest threat to or best opportunity for the project objectives. What are the immediate steps you should follow, after planning for risk response process? Each correct answer represents a complete solution. Choose three.

A. Updating Project management plan and Project document

B. Explanation:

The risk register is updated at the end of the plan risk response process with the information that was discovered during the process. The response plans are recorded in the risk register. Project management plan consisting of WBS, schedule baseline and cost performance baseline should be updated. After planning risk response process, there may be requirement of updating project documents like technical documentation and assumptions, documented in the project scope statement. If risk response strategies include responses such as transference or sharing, it may be necessary to purchase services or items from third parties. Contracts for those services can be prepared and discussed with the appropriate parties.

C. Applying controls

D. Updating Risk register

E. Prepare Risk-related contracts

Answer: A,B,D,E

Explanation:

is incorrect. Controls are implemented in the latter stage of risk response process. It is not immediate task after the planning of risk response process, as updating of several documents is done first. The purpose of the Plan Risk Responses process is to develop risk responses for those risks with the highest threat to or best opportunity for the project objectives. The Plan Risk Responses process has four outputs: Risk register updates Risk-related contract decisions Project management plan updates Project document updates
